

Crusader user manual

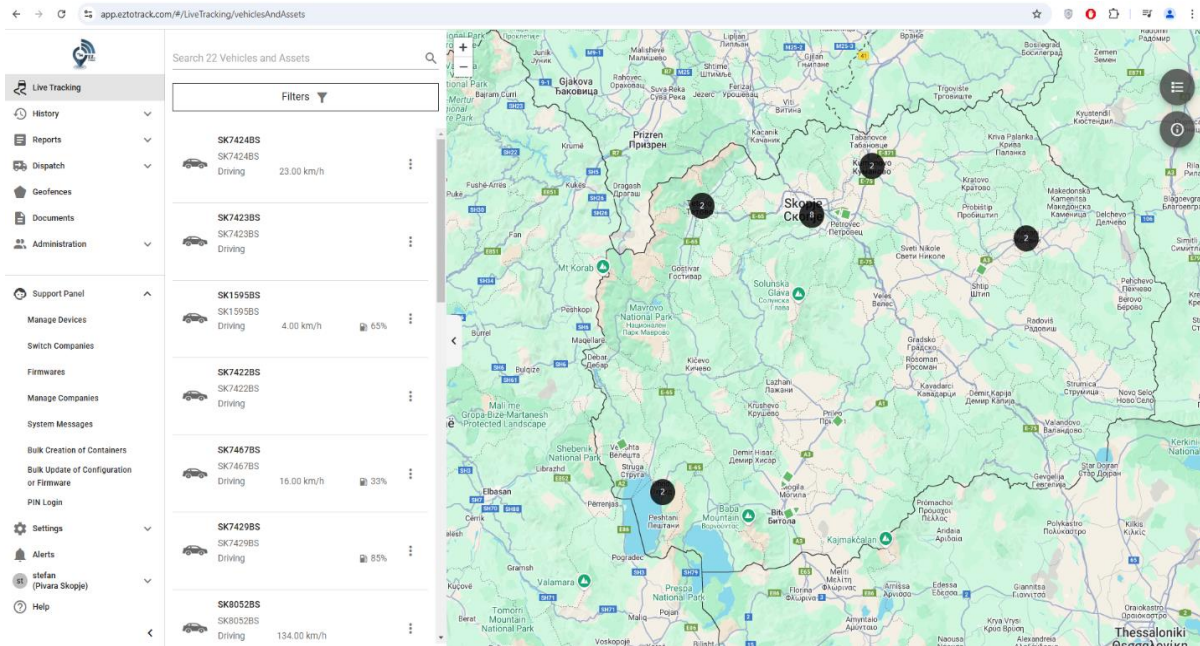

This is a user manual for Crusader application, which will provide you with everything you need to know about its usage.

The first thing to do is to navigate to this link <https://app.eztotrack.com/#/> in any browser, where you will see the Login page.

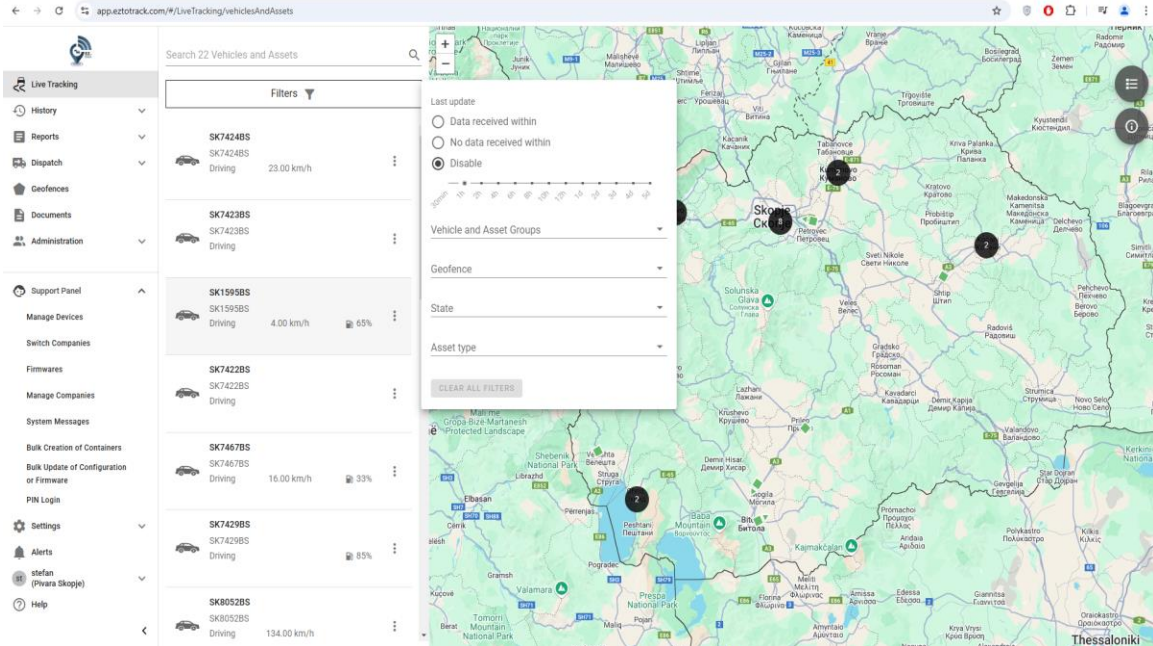

After you enter your email and password, you will be redirected to the Live tracking screen, where you can preview all the vehicles and assets on the map and on the list.

Live tracking

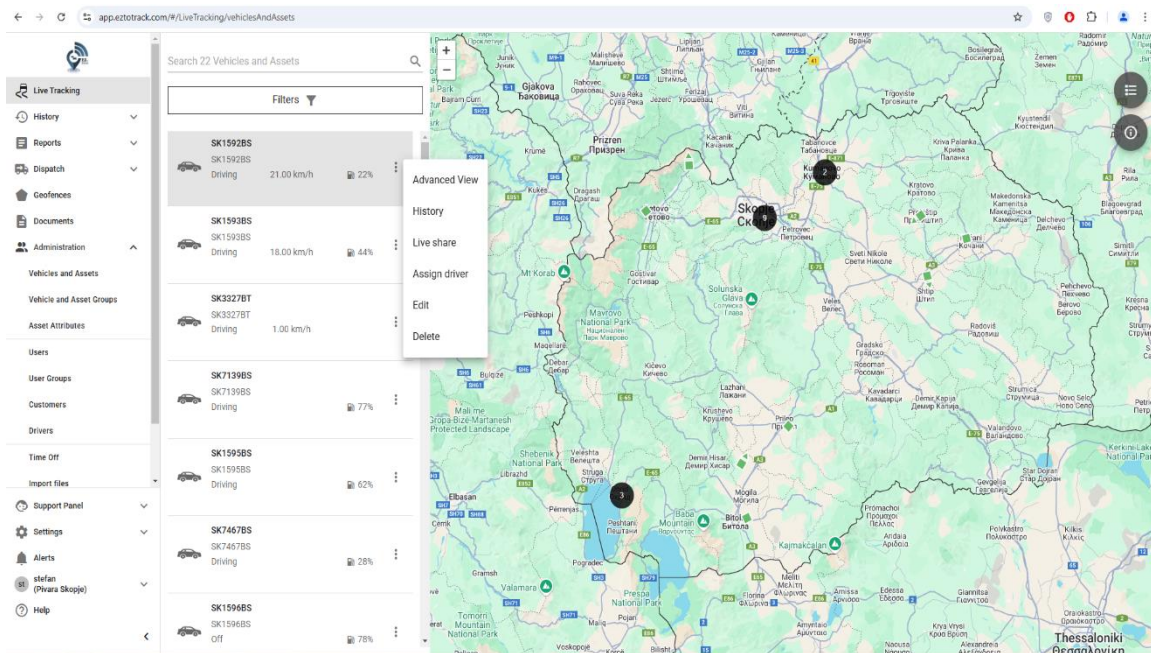

On this screen there are multiple functionalities:

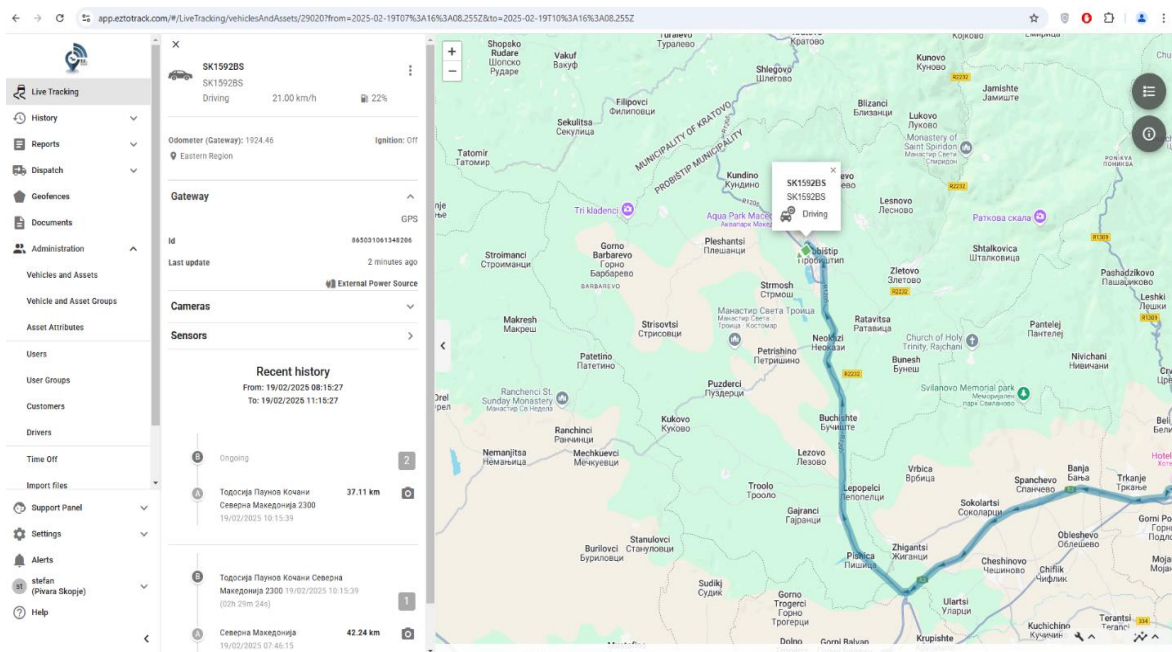

1. You can search for any vehicle in the search bar in the list and will filter out all other vehicles and assets in the list and in the map, except the one that is searched.
2. If you click on the Filters button, the menu will be opened with multiple filters:

- The first filter is filter by Last update, which will filter out all vehicles and assets that has sent or has not sent data (depending on the option that is selected) within the chosen period.
 - The second filter is filter by Vehicle and Asset Groups, which will filter out all the vehicles and assets which are not part of the selected Vehicle and Asset Groups.
 - The third filter is filter by Geofence, which will filter out all vehicles and assets which are not part of the selected Geofences.
 - The fourth filter is filter by State, which will filter out all vehicles and assets which are not in the selected State.
 - The fifth filter is filter by Asset type, which will filter out all vehicles and assets which type is not one of the selected Asset types.
3. In the vehicles and assets list if you click on some of the vehicle it will zoom in that vehicle on the map. In the three dots in each vehicle in the list, there are some options:

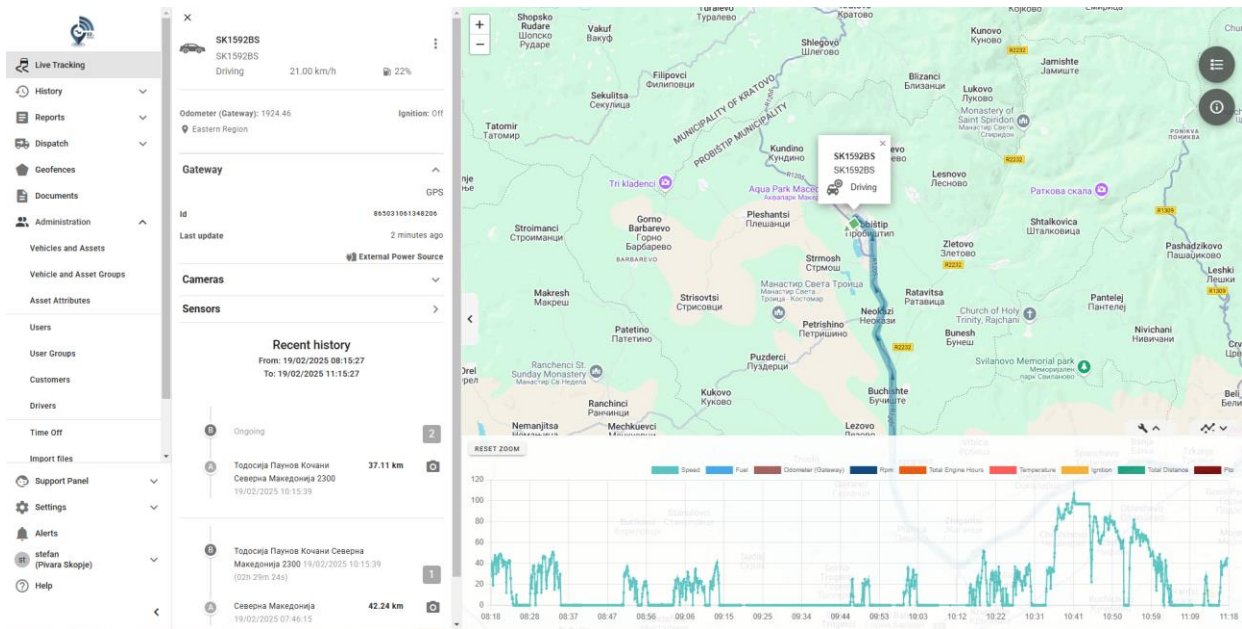

- The first option is Advanced view, which will give you more detailed information about the vehicle and the history of the vehicle movement for the last three hours.

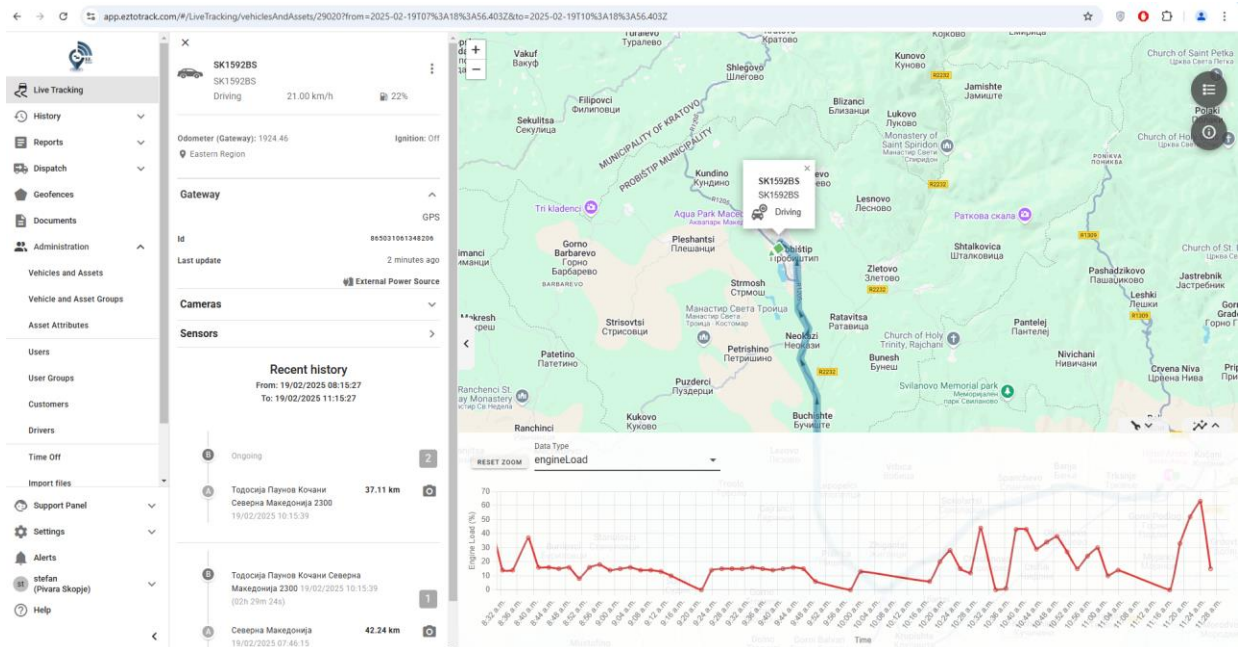

- At the bottom right of the Advanced view screen there are some options for chart data representation, which gives more detailed information about vehicle speed,

fuel etc.

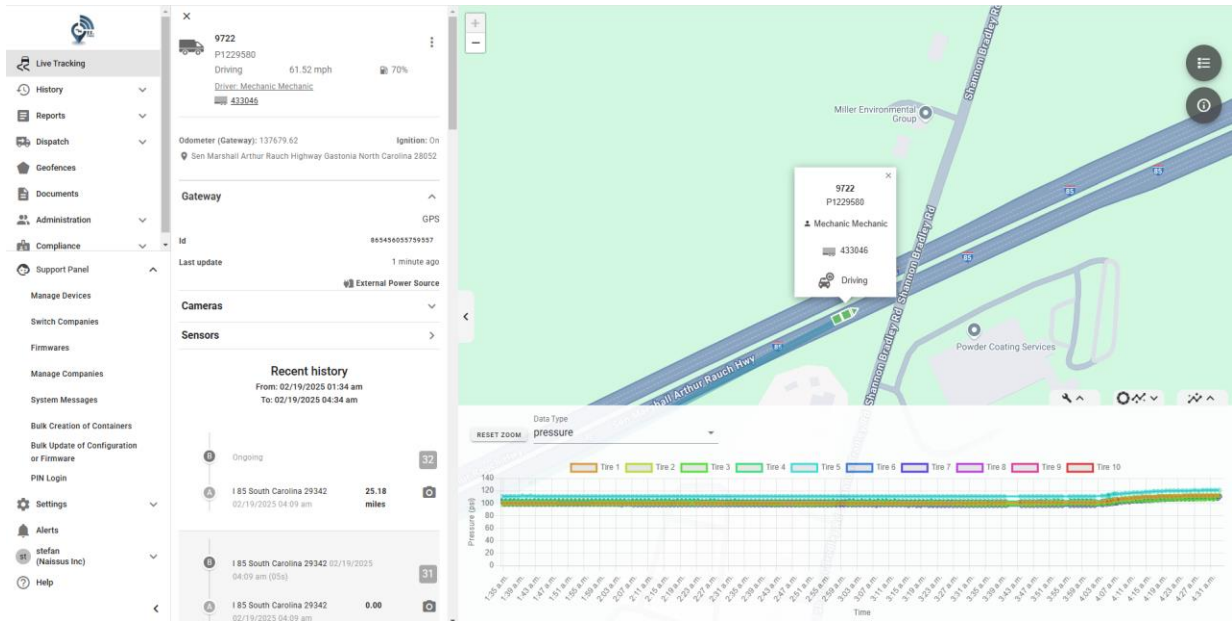

- Also, there is a chart for CAN diagnostics, where you can choose some options from the dropdown and see the data in the chart.

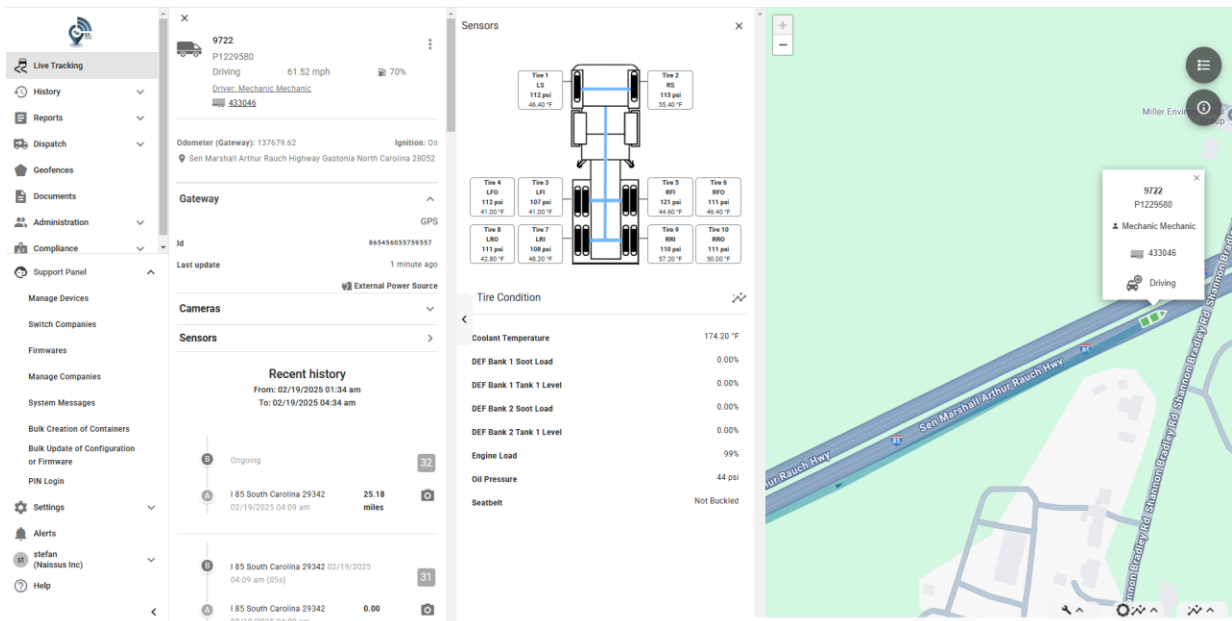

- If the company has TPMS (tire pressure) sensors and the vehicles have sensors installed, there will be another chart available where you can preview the data for

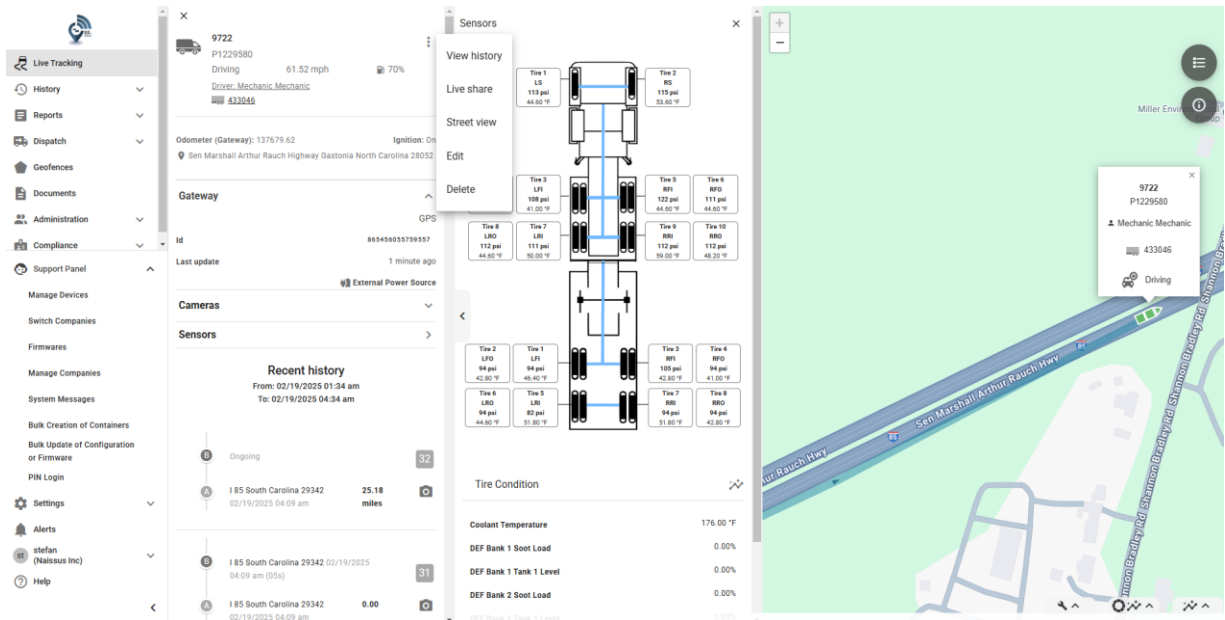

each tire.

- If the vehicle has sensors installed, you can see the tires of the vehicle when you click on the Sensors button.

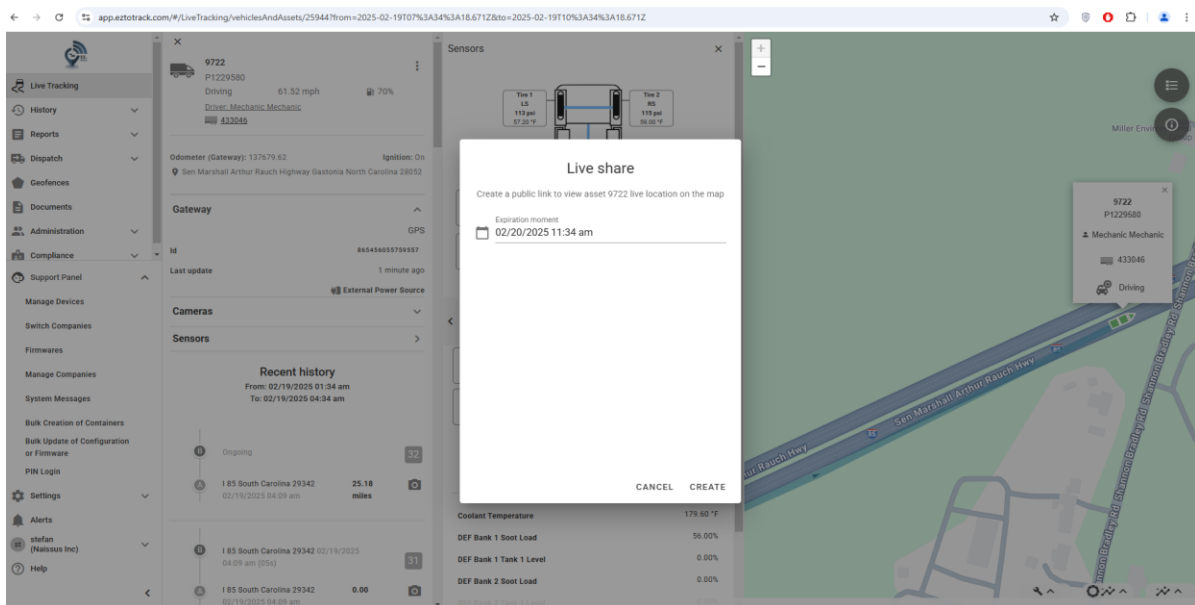

- On the three dots there are some options:

1. The first option is View History and when chosen it will redirect you to a history screen with the default history of the last day.

2. The second option is Live Share and when chosen it will open a popup with a public link which has an expiration date that you can set in the date picker, and with the link you can open the application without the need of login, and preview the vehicle on the map along with additional information like speed, odometer, latitude and longitude etc.

3. The third option is street view where you can preview the vehicle in street view mode.

4. The fourth option is Edit, which will open the edit form for the vehicle.

The screenshot shows the 'Edit Vehicle and Asset' form. On the left is a sidebar menu with options: Live Tracking, History, Reports, Dispatch, Geofences, Documents, Administration, Support Panel, Manage Devices, Switch Companies, Firmwares, Manage Companies, System Messages, Bulk Creation of Containers, Bulk Update of Configuration or Firmware, PIN Login, Settings, Alerts, stefan (Pivara Skopje), and Help. The main form area contains the following fields:

Type *	Vehicle	Unit number *	SK8611BS
Vin (Vin manually entered)	VF1RJA00074037237		
License plate *	SK8611BS		
Year of production	RENAULT CLIO EVOLUTION Tce 100 LPG		
Note			
Type *	GPS	Assign Device	865031061349287
Last device attached - /			
Rfid			
Upload your image here			

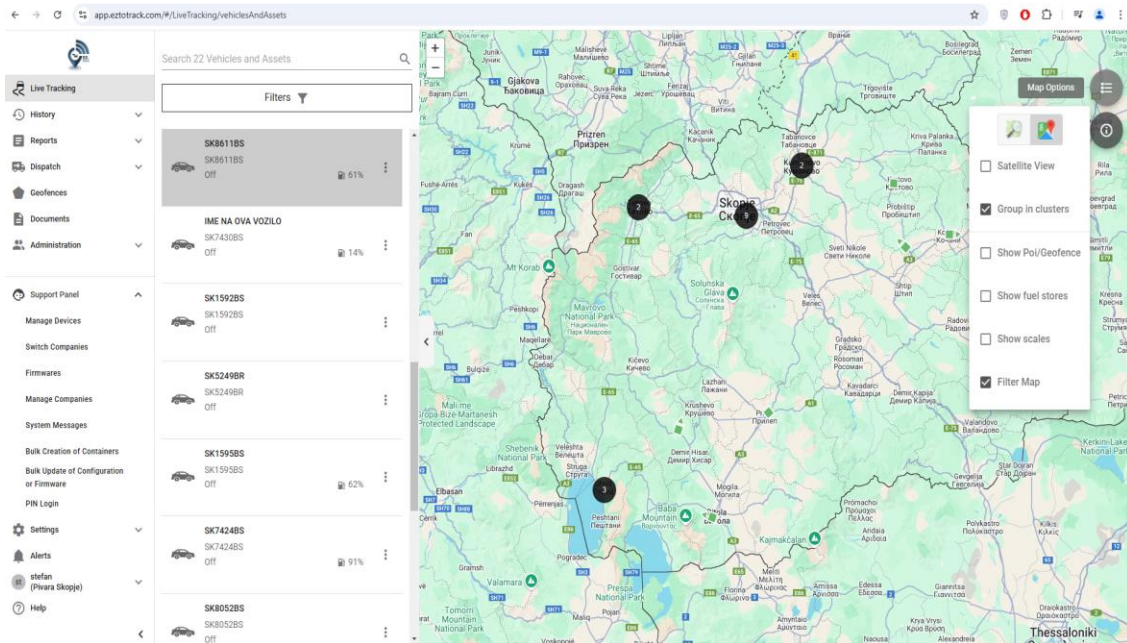

5. The fifth option is Delete, which will delete the vehicle.

The other options from the three dots from the vehicle list are the same as the options from the Advanced view options, with the difference that in the vehicles list there is an

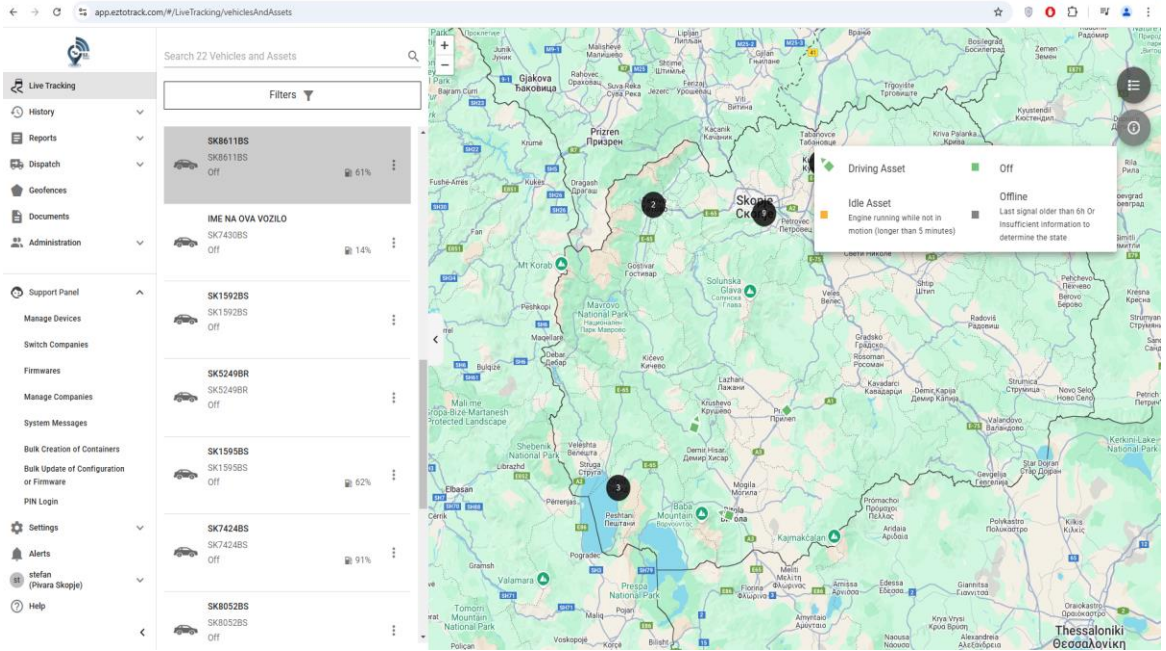

option for assigning driver on the vehicle, and in Advanced view there is a Street View option.

At the top right of the Live tracking screen, there are Map Options and Map Legend.

- Map Options give you options for the map, like Satellite View, Group in clusters etc. You can also change the type of map by clicking on the icons for google maps or open street maps.

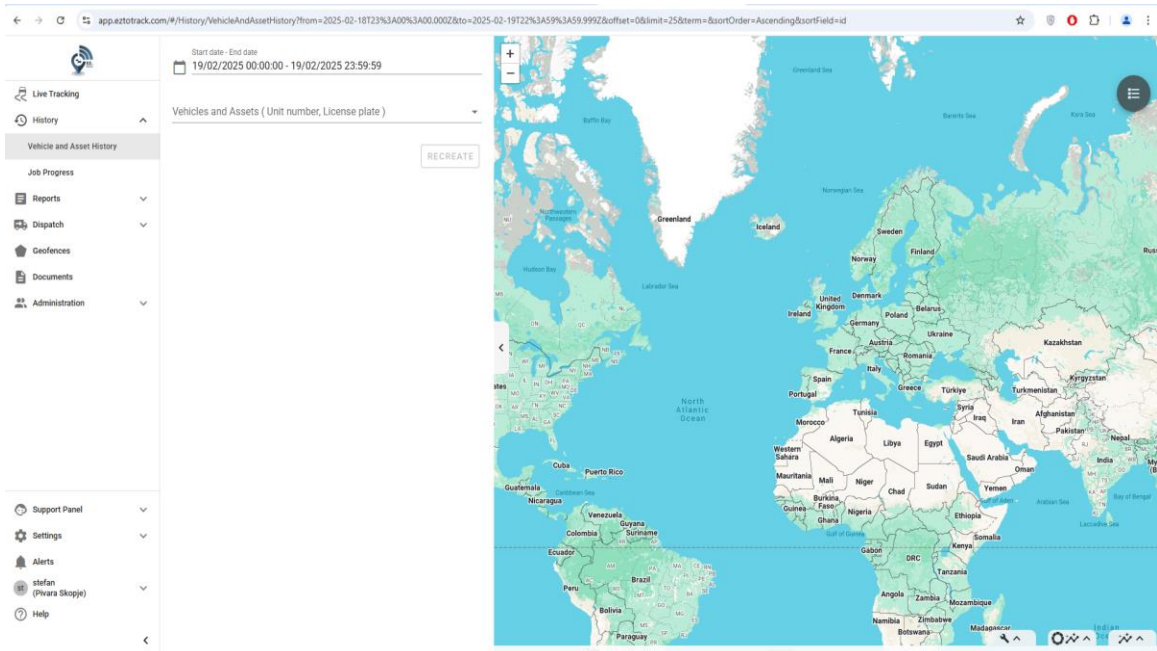

- Map Legend gives you information about the markers for the vehicles on the map. Each marker is different depending on the state of the vehicle.

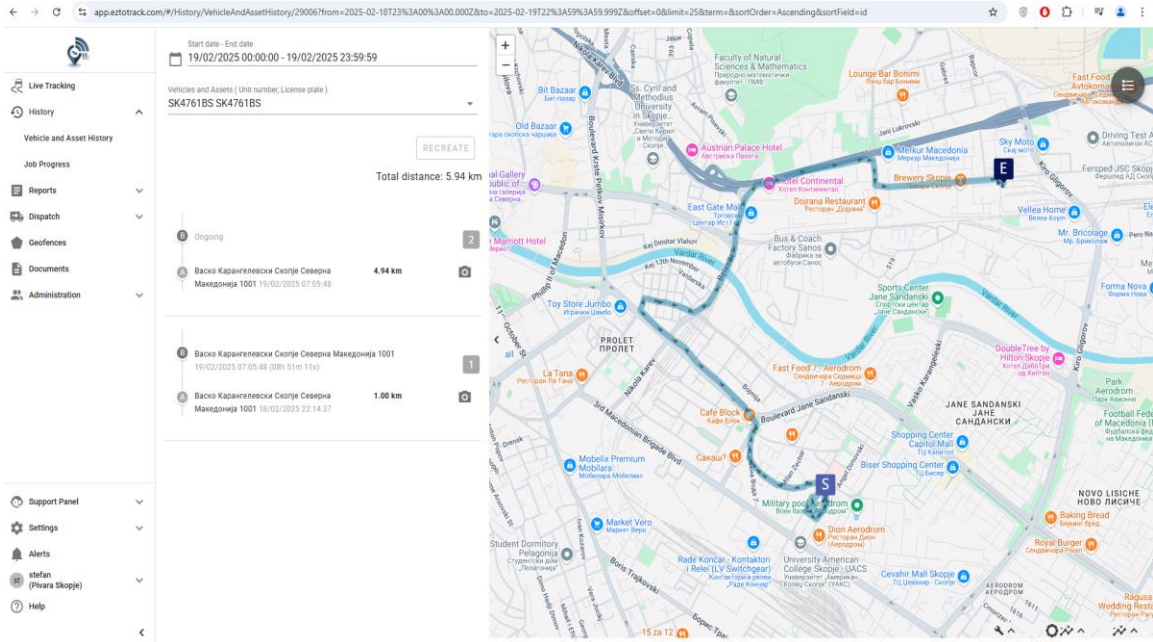

History

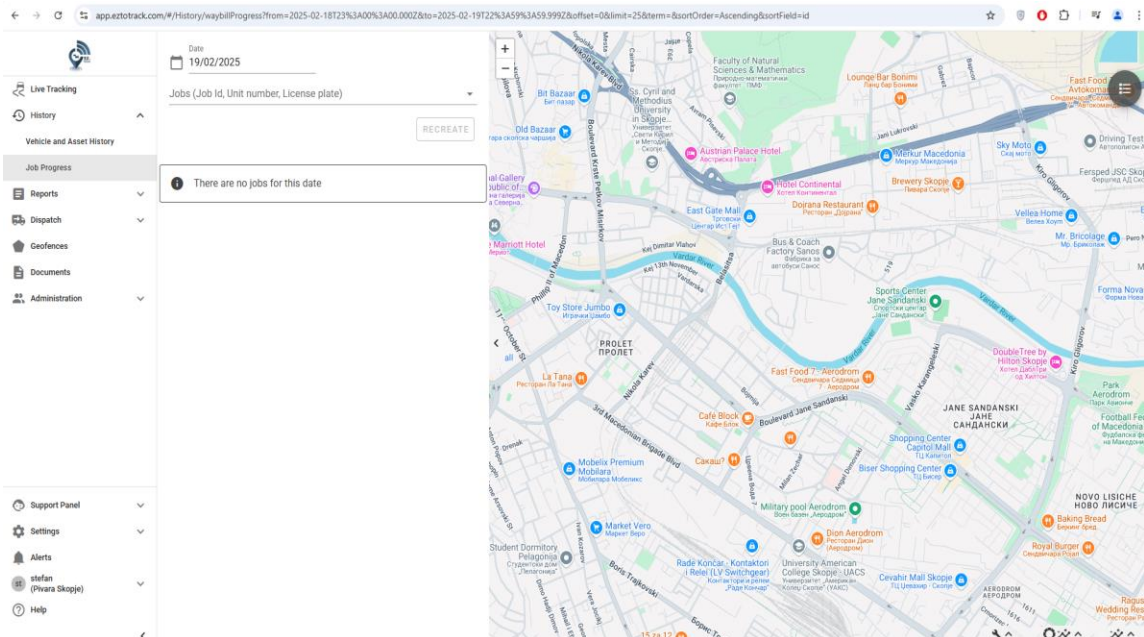

The second feature of the application is History, where you can preview history for a specific vehicle and asset. It is placed in the sidebar as a dropdown with two options: Vehicle and Asset history and Job progress.

- **Vehicle and Asset history:** This screen has a date and time picker where you can choose two dates (or double click on one date) depending on how many days you want to see history for the vehicle. Also, there is a dropdown of all vehicles and assets, so you can choose the vehicle or asset. On recreate button it will give you the history drawn on the map, and history trips shown below the recreate button. All the charts mentioned in the Advanced view are present on this screen also.

- Job progress: This screen is pretty like Vehicle and Asset history, but instead of date picker with two dates, there is only one date, and instead of vehicles and assets dropdown there is jobs dropdown. The difference on the map is that will show also the markers for all points of interest for the job, which will be with different colors, blue if the point of interest is not visited, orange if it is still in the point of interest, and green if it has served that point of interest and has left.

Administration

In Administration dropdown there are different options like creating or seeing a table of vehicles/assets, users, drivers, asset groups, user groups etc.

- **Vehicles and Assets:** On this screen there is a table of all vehicles and assets, where you can filter out the vehicles and assets by type or search for a specific vehicle or asset. Also, there is an option to Activate or Deactivate vehicle or asset, and view and edit option. At the top right corner there is a button for Add new vehicle/asset. By clicking on Add Unit, you will be redirected to form for adding new vehicle/asset. By clicking the eye icon or the pencil icon from the table you will also be redirected to the same form only prepopulated with the current information's about the vehicle/asset, and you can edit the vehicle/asset if the pencil button is clicked and only preview if the eye button is clicked.

SK8052BS	SK8052BS		26.48 km

- **Device activity report:** This report is related to the devices that are attached to the vehicles and their activity. It has filters by day, and a search input. The filter by day gives information how many devices were active for the days that are entered in the input.

- **Business Mileage:** This report is about the kilometers that the vehicle has passed in and out of working hours as well as the kilometers that the vehicle has passed in and out of annual leave. Also, there is information about fuel and toll transactions.

The screenshot displays the 'Business Mileage' page. The sidebar on the left contains navigation links: Live Tracking, History, Reports, Retention Time At Buyer, Mileage Report (selected), Geofence Entry-Exit, Device Activity Report, Business Mileage, Asset Location, History Trips, Mileage out of geofence, Geo History, TPMS Report, Dispatch, Geofences, Documents, Support Panel, Settings, Alerts, stefan (Phara Skopje), and Help. The main content area has a header with a back button, breadcrumb 'Reports / Business Mileage', and a search bar. Below the header, a table lists vehicle mileage data. The table has the following columns: Name, License plate, Model, Type, Internal Order, Brand name, Payment number, End order, Execution date, Mileage in, Time in, Mileage out, Time out, Mileage out annual leave, Time out annual leave, Function, Region, Country, Annual Time in, Annual Time Out, Annual Annual leave, Annual Time in, Annual Time Out. The table contains 10 rows of data.

- Mileage out of geofence: This report is about how many kilometers the vehicle has passed outside the geofence.

Dispatch

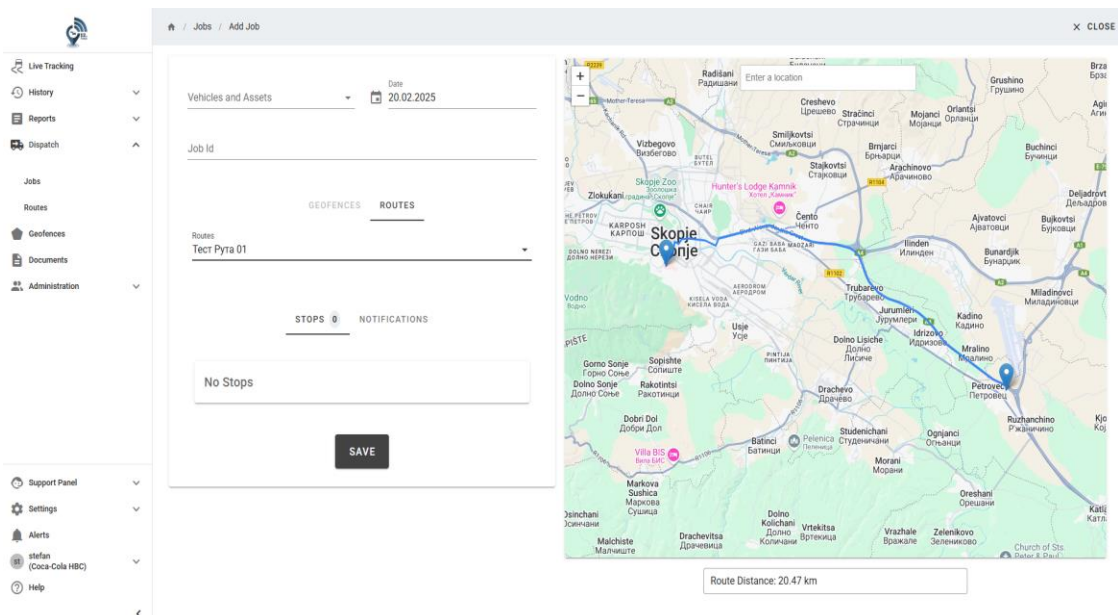

The Dispatch dropdown gives the options to create Jobs and Routes.

- **Jobs:** In this screen there is a table of all jobs, with the same options as all other tables for editing and previewing the job. Also, there is a date range filter and search filter. At the top right of the screen there are two buttons. Add Job and Import Jobs.
1. When you click Add job, you will be redirected to the Add job form, which has two options. To create a job with points of interest, or to create a job with route. The default option is to create a job with points of interest, where besides the dropdown of all the vehicles and assets, the date picker and the job Id, it has a list of points of interest, which you can select and create the job.

If you choose the second option, to create a job with route, instead of a list with points of interest, it will be a dropdown with routes, and when a route is chosen it will show the map with the route and below the map will have the route distance.

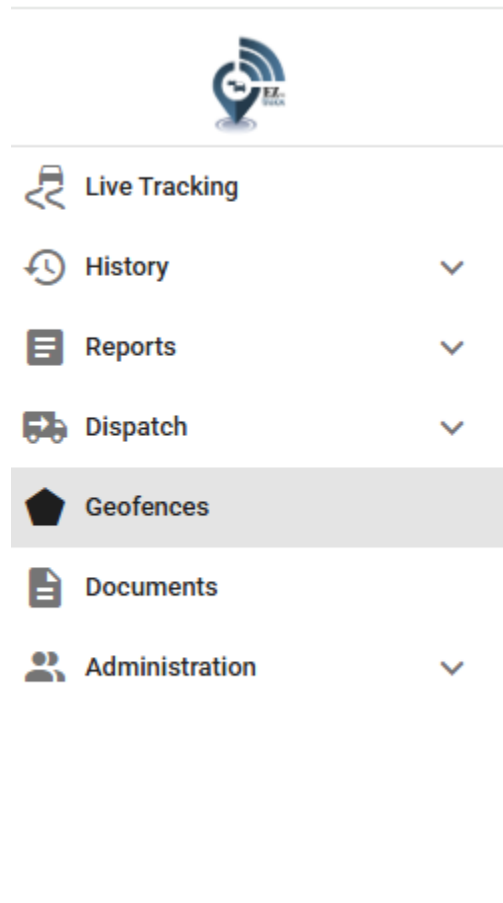

2. When you click on import jobs button, you will be redirected to import jobs screen, where you have a date picker, a file input for uploading a file, and od send to process button you can upload the file.

- **Routes:** On this screen you will see a table of all routes with the ability to edit, preview or delete the route, and a search bar for filtering out the routes.

Name	Code	Note	Distance	Action
Tect Pyra 01	TP01	Tect	20.47 km	[Edit] [Delete]

On the Add route button you will be redirected to the Add route screen where there is a form for creating the route and a map to preview the route and the option to create the route from the map. You can choose as many geofences (points of interest) as you like, and as soon as you have chosen two or more geofences the route will be drawn on the map with the point markers for the geofences. Also, you can right click on the map and add custom point.

Geofences

On geofences screen there is a table of all geofences, with the options of preview, edit and delete geofence. There is a search input to filter out geofences.

On Add geofence button, you will be redirected to the Add geofence page where there is a form for creating a geofence and a map, on which you can draw different shapes for the geofence or right click the map to add a single point and the geofence will be drawn around the point. Also, you can write the address in the address input in the form, which will give you suggestions about the address that you're entering and when chosen will add a marker on the map.

TPMS (Tire pressure monitoring system)

TPMS are sensors that are installed on the tires of certain types of vehicles, not all the types of vehicles in the application have the option for TPMS sensors. The sensors can be added after the vehicle is created in Add Unit in Vehicles and Assets in Administration menu from the sidebar.

The screenshot shows the 'Edit Vehicle and Asset' form in the app.ezotrack.com web application. The form is divided into several sections:

- Vehicle Information:** Type (Sleeper Cab), Unit number (6991), VIN (4V4NC9EH5RN656991), License plate (P1228740), Year of production (2024), and Manufacturer (VOLVO GROUP NORTH AMERICA, LLC).
- Additional Information:** Note, Type (GPS), Assign Device (S/N: 865456055762528), Last device attached (/), and Rfid.
- Actions:** A '+ EDIT SENSORS' button is located next to the 'Last device attached' field.
- Image Upload:** A box labeled 'Upload your image here' is at the bottom of the form.

If the vehicle already has sensors installed, you will see a button Edit sensors, and if the vehicle has no sensors installed, you will see a button Add sensors. When this button is clicked, a pop up will be shown, with an image of the type of vehicle and all the tires. If a tire has sensor, it will be displayed the id of the sensors as information.

On click on tire, another pop up will be shown for assigning sensor to the tire. There are two options:

1. You can scan the QR code from the sensor.
2. You can manually enter the sensor Id.

+ EDIT SENSORS

BACK

After the sensors are assigned and installed, you can preview the sensors in the advanced view screen in live tracking.

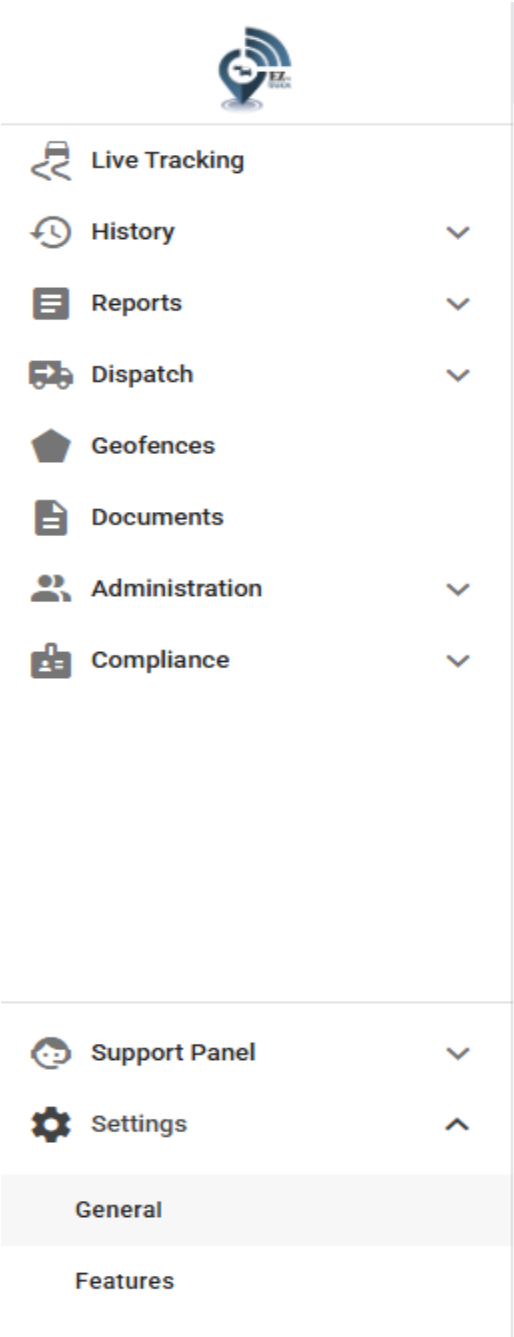

If you click on some of the tires, you will see more information about the tire.

Company Settings and features

Under the settings dropdown in the sidebar, there are options to see company settings and company features.

Under General are the company settings where you can see the company settings and edit it if needed.

Basic Tracking

This feature allows the user to see a list of vehicles and assets with informations about their name, status, speed, last update and driver, and also to see the vehicles/asset on a map. Also there are filters to filter vehicles/assets by last update, vehicle/asset groups, geofences, state and types. For every vehicle/asset in the list there is a menu with options for:

1. Advanced view - an option that allows the user to see more detailed information about the vehicle/asset, like odometer, ignition, current address, time since last movement and vehicle/asset history for the last hour.
2. History - an option that allows the user to see the history for the last two days.
3. Live Share - an option that provides a link to see the vehicle/asset with live updates
4. Assign Driver - an option with dropdown of drivers that allows the user to assign driver to the vehicle/asset
5. Edit - an option that allows the user to edit the vehicle/asset
6. Delete - an option that allows the user to delete the vehicle/asset

Also the user can choose to see history for specific vehicle/asset. In the history component there is a date-time picker with range so that the user can choose two dates, and dropdown with vehicles/assets to choose specific vehicle/asset, and recreate button to show the history. Also there is a toggle button to see all geofences.
